

Step 1: Plot the Close price

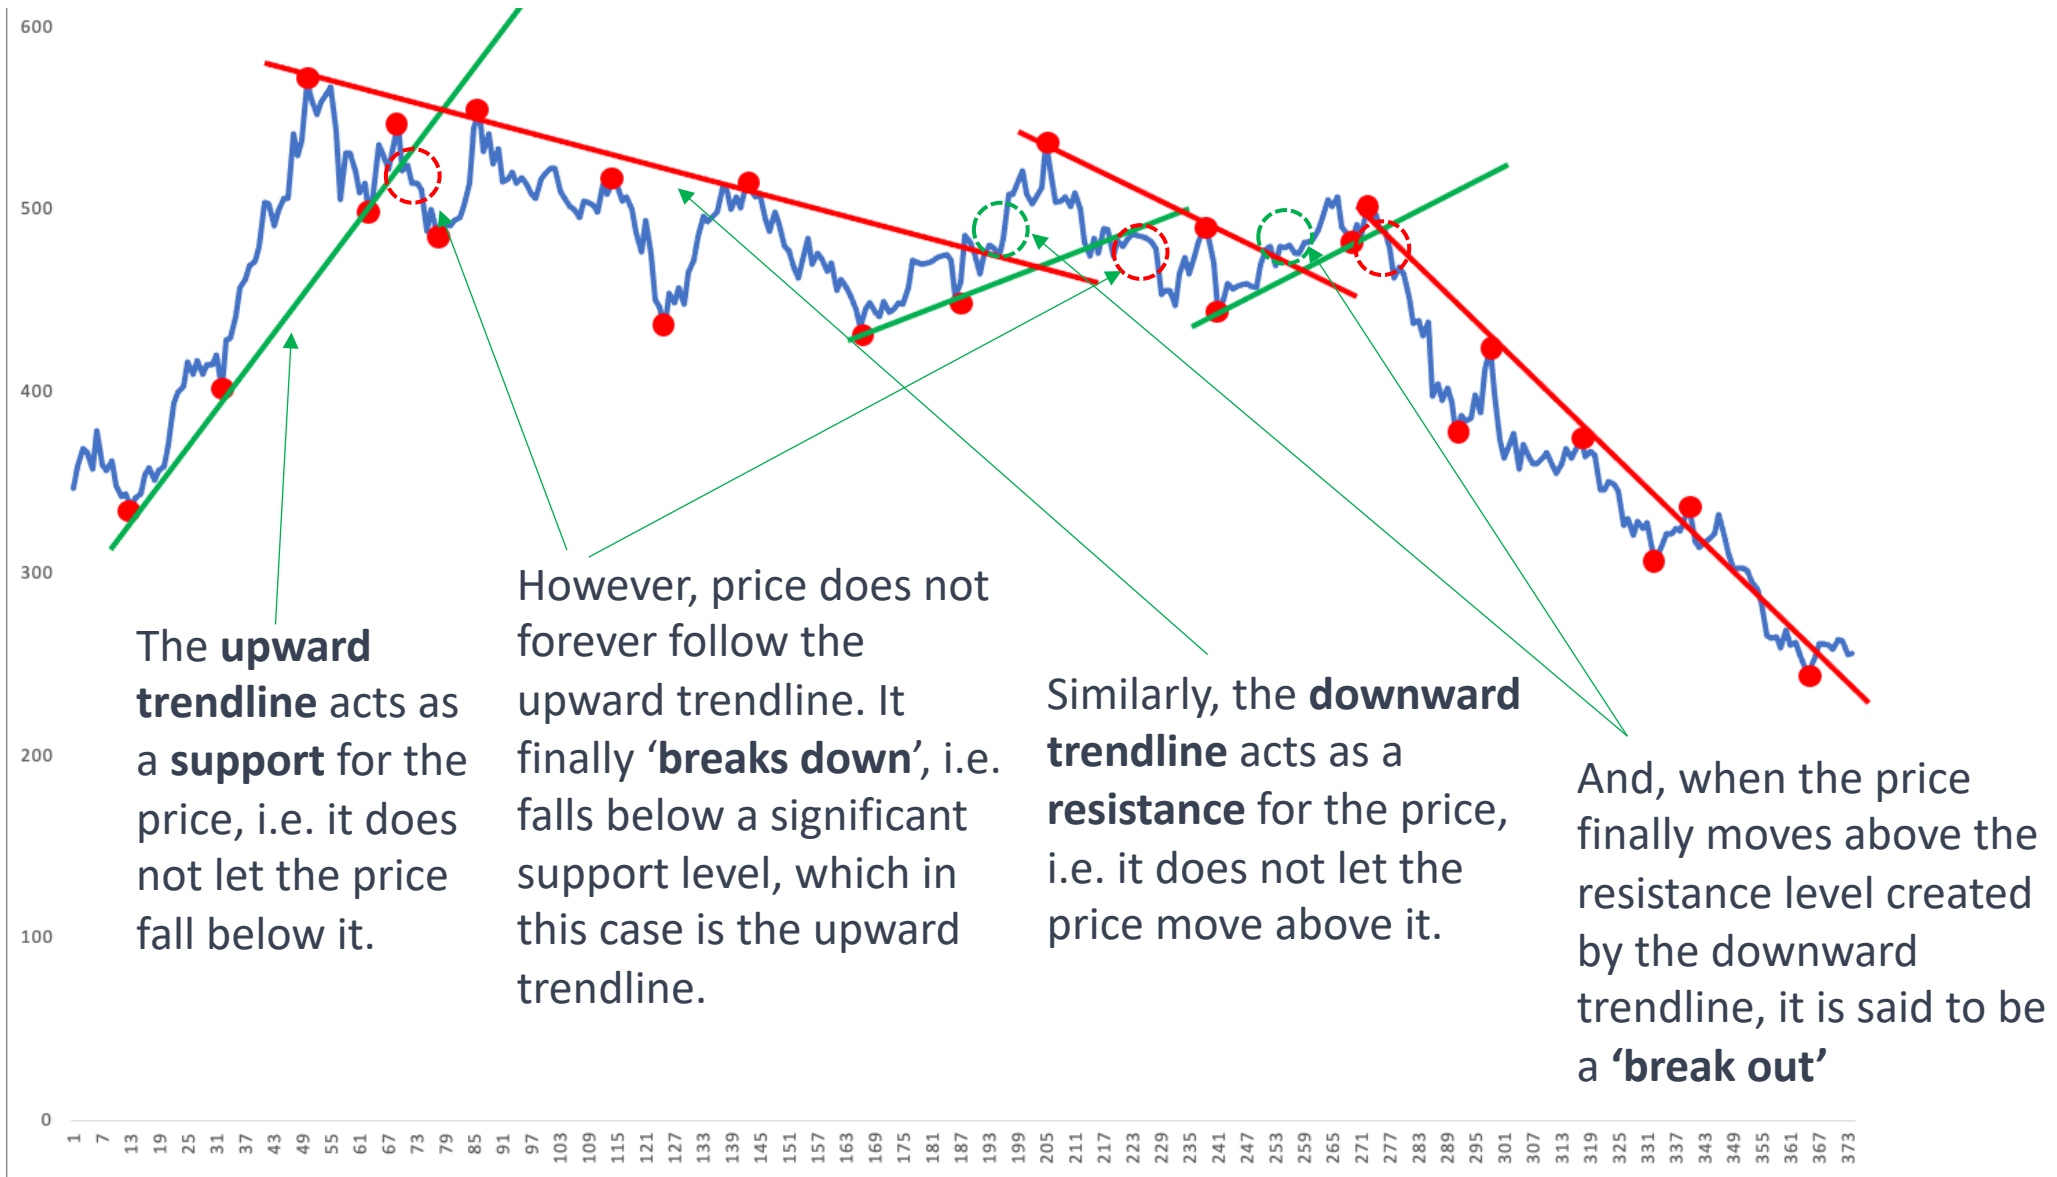

## Step 2: Identify and plot the Swing Low/High Points

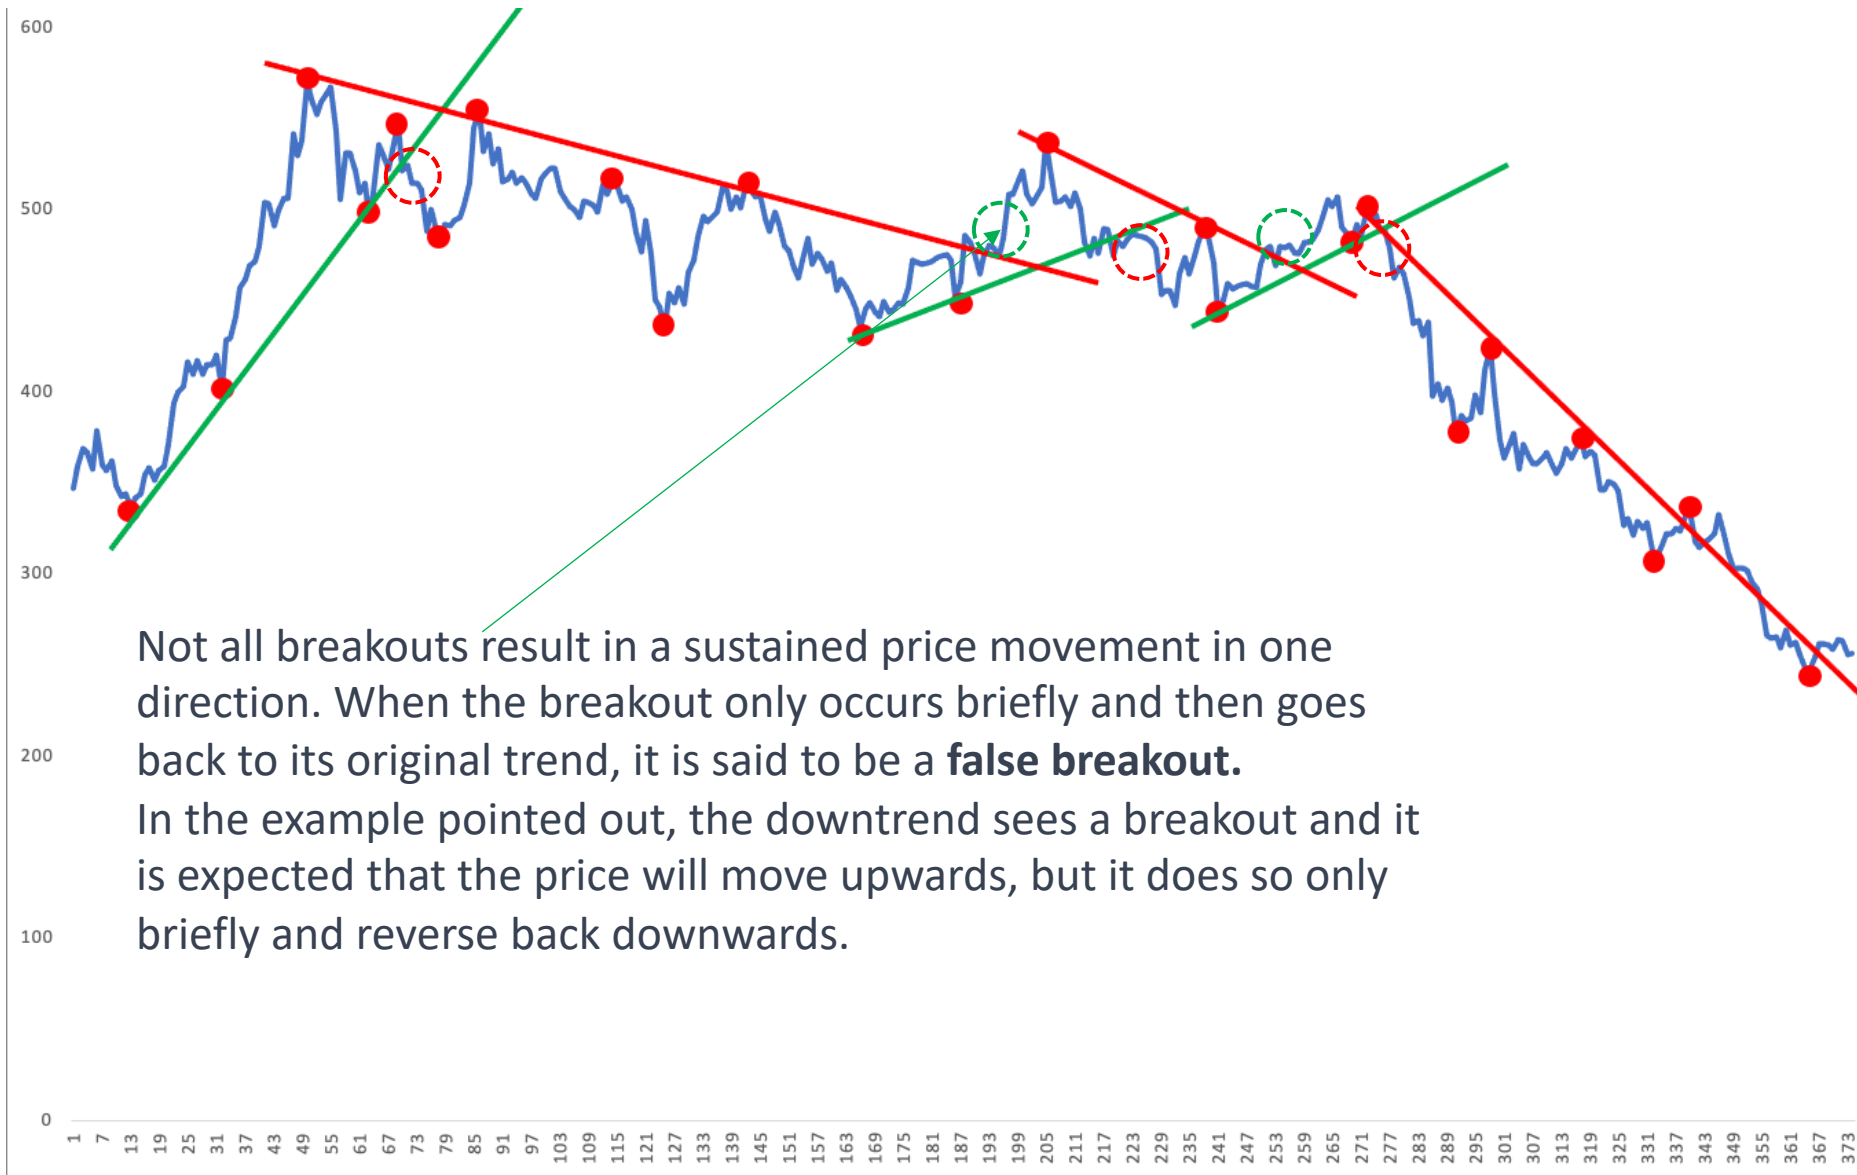

### Step 3: Identify and Plot Trendlines (Uptrend and Downtrend)

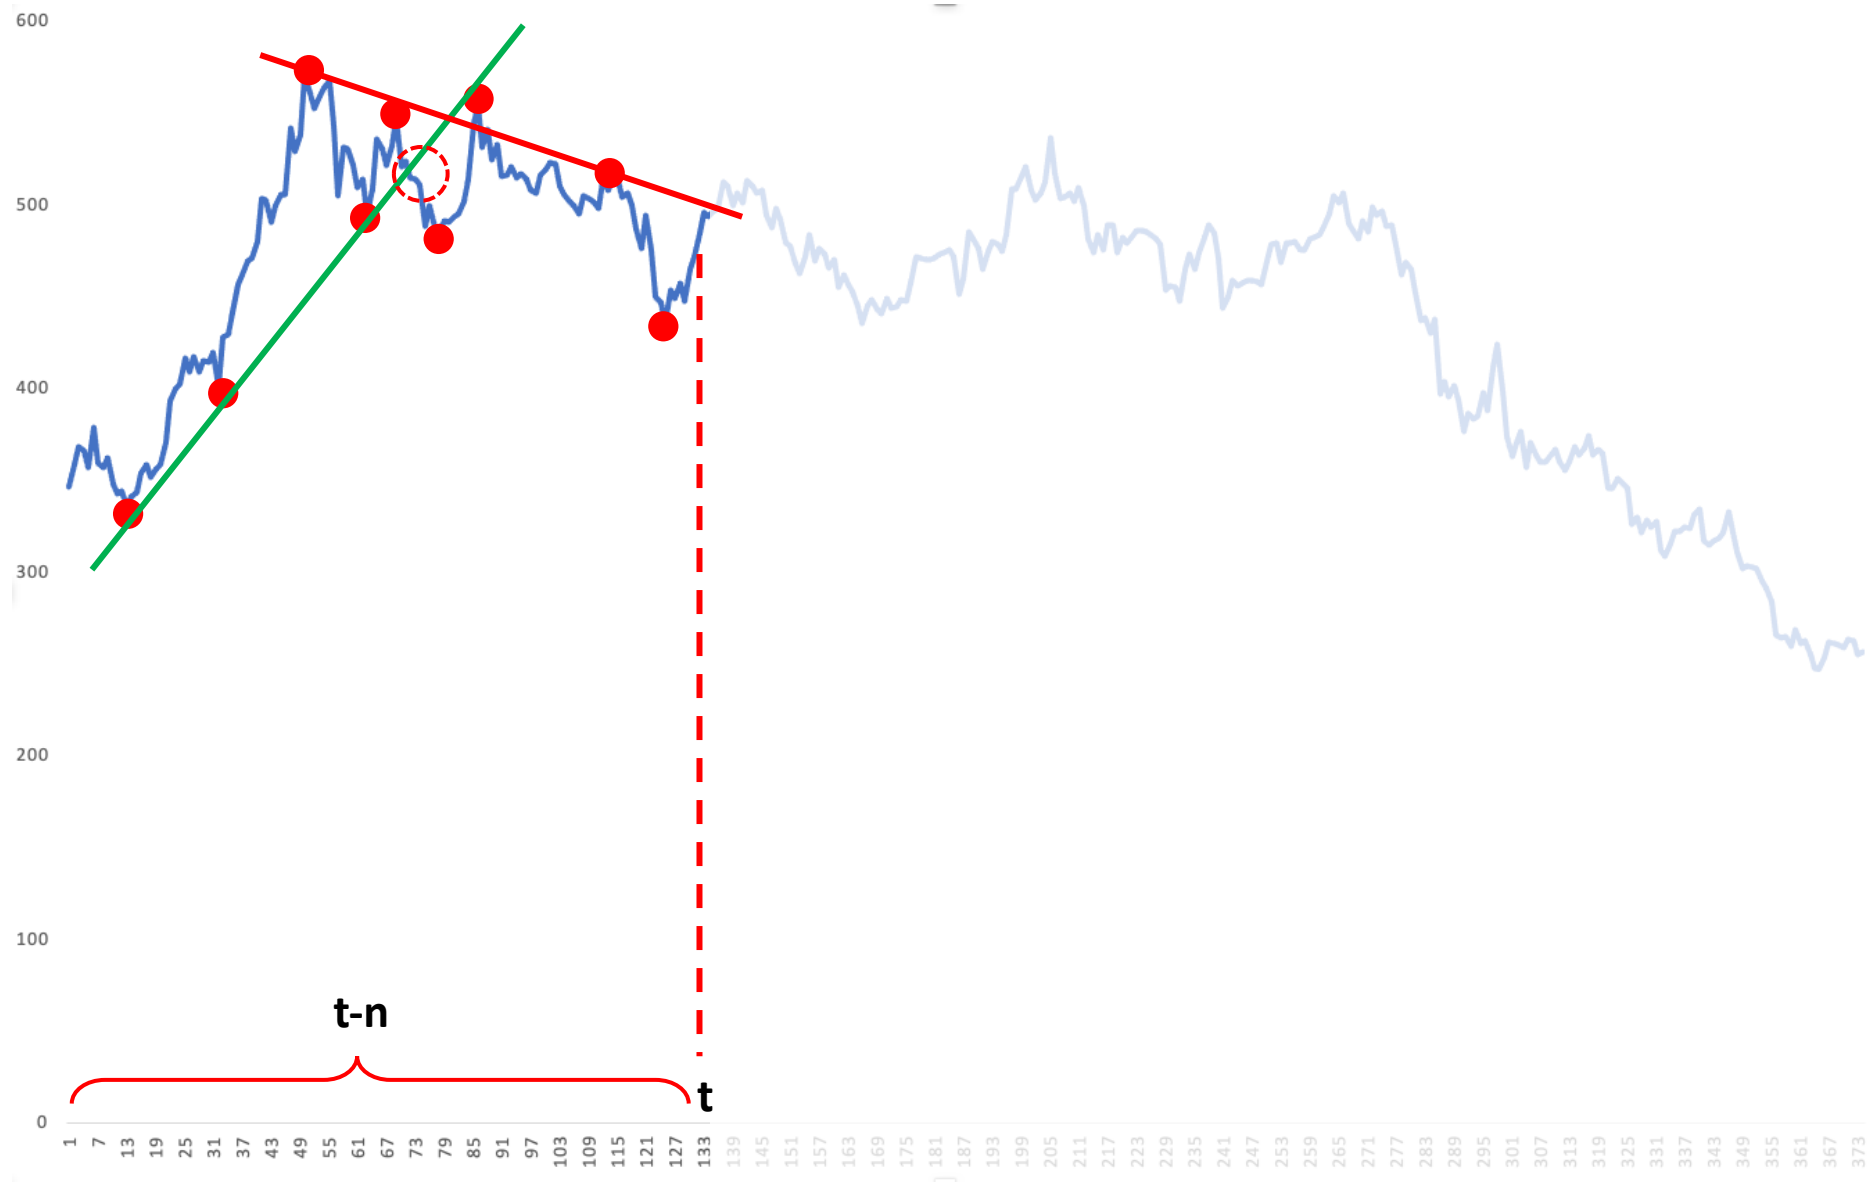

## Step 4: Identify Breakout/Breakdown Points

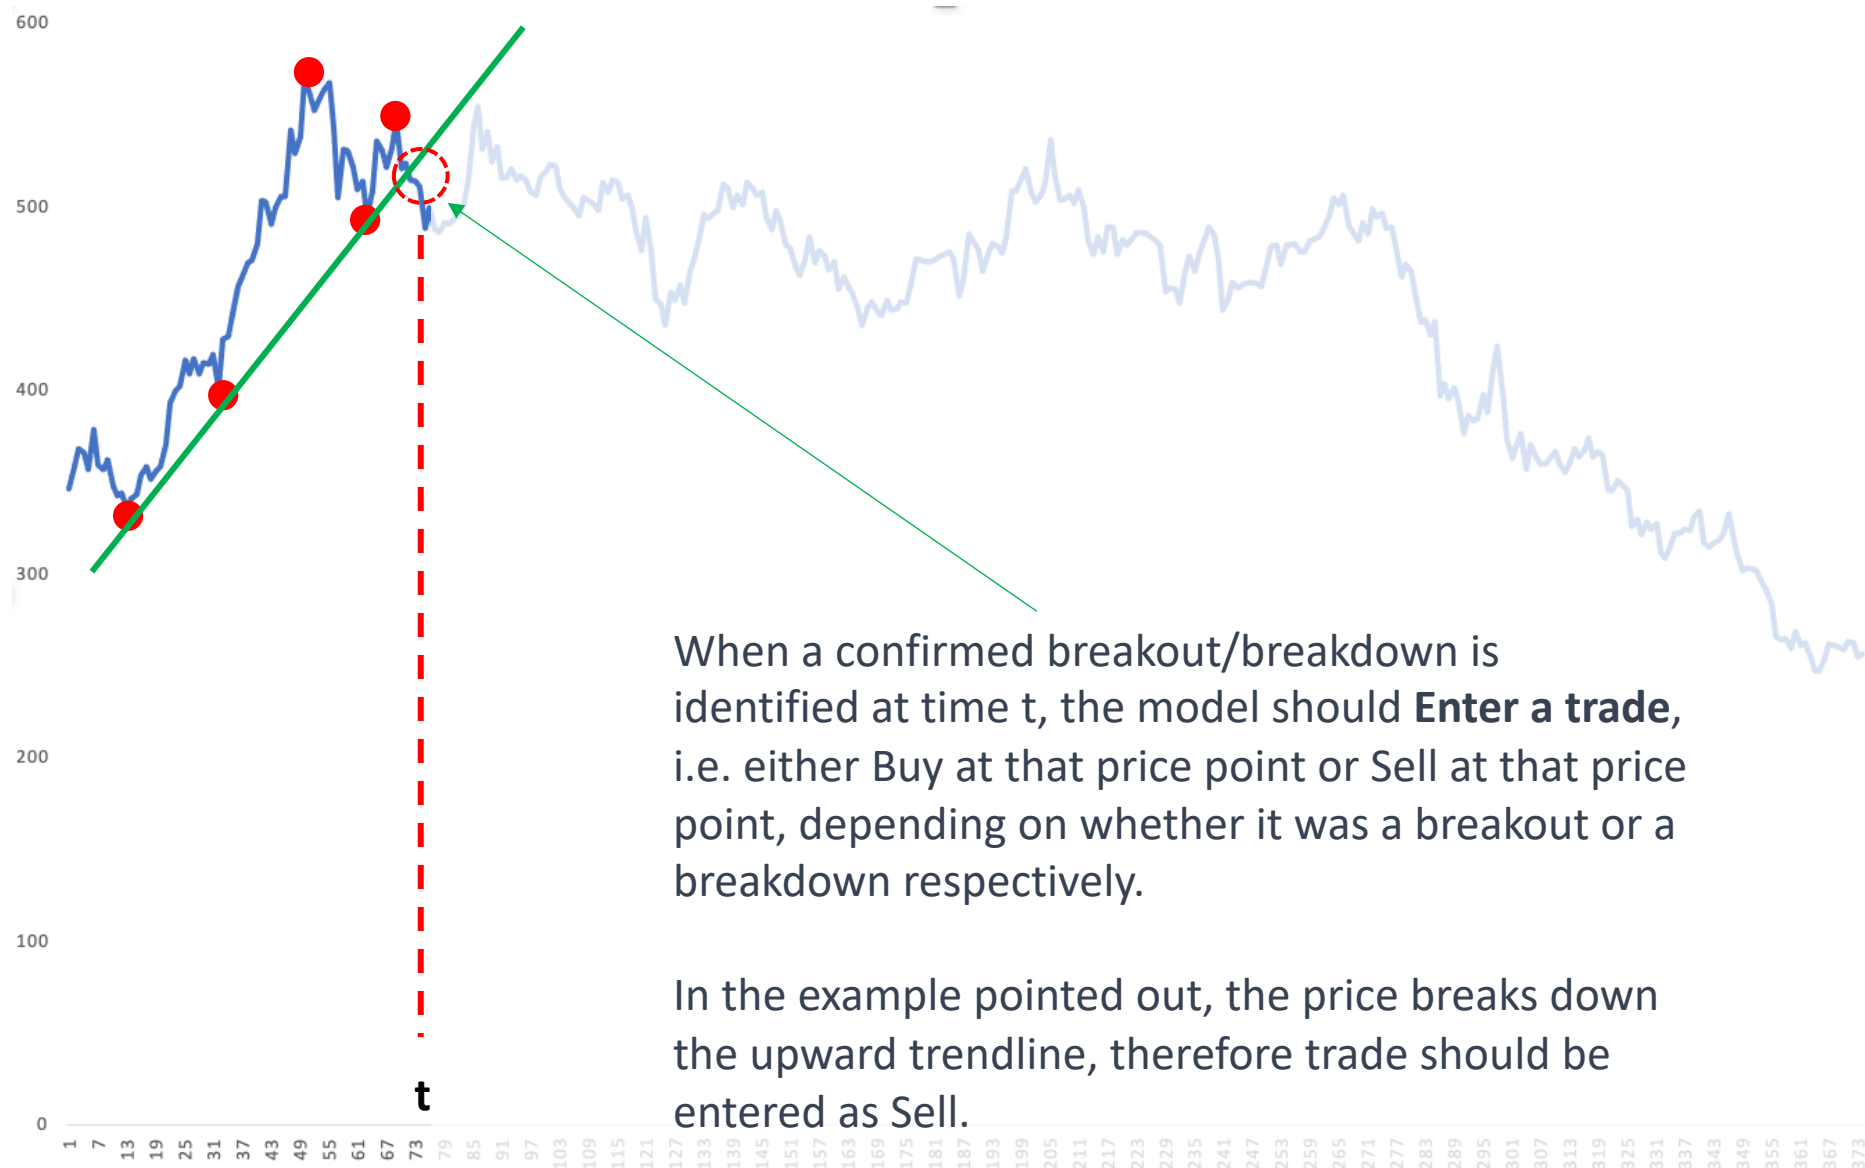

## Step 4: Identify **False** Breakout/Breakdown Points

**Most important note: The model should not look at the future ever. It should only look at the past data to do any computations – swing high/low points, trendlines, breakout/breakdown points, etc.**

## Step 5: Identify Trade Entry Points

Step 6: Decide **Take Profit** and **Stop Loss** Prices for Exit
